

Known Issues

Cannot connect to iSCSI target server

Summary

After creating an iSCSI target with AIP2018, you may not be able to search or connect from the iSCSI initiator.

Cause

This is a known issue.

The naming convention for iSCSI targets quotes host names. If this host name contains an underscore [_], you cannot search or connect. This is because the underscore is disabled in the iSCSI IQN naming convention. In the next release, IQN will be renamed with invalid characters removed.

Products

- ActiImage Protector 2018 Update1 or later
